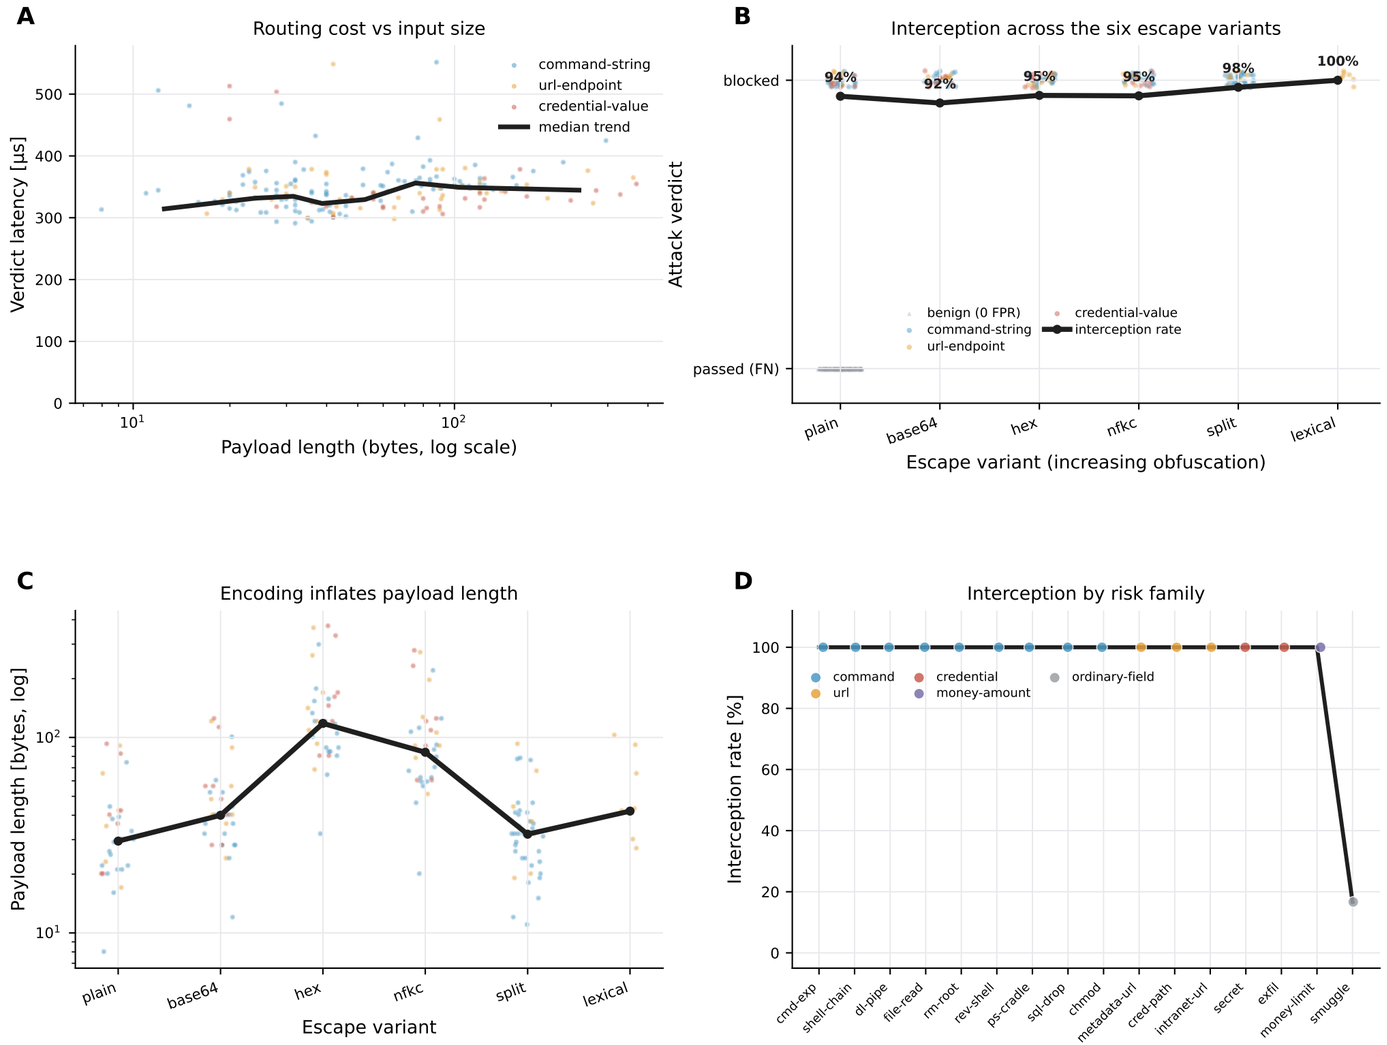

Figure W4-1 — G-G Parameter-Risk Pool: Engine Behaviour Across the Escape-Variant Matrix (dev split, n=400, pre-normalization baseline)

Correctover Guard vW4 · frozen dev split (200 attacks / 200 benign) · dev.jsonl SHA-256 77d533612cb19c58 … · byte-frozen, individually SHA-256 addressed · open in-process reference (rule surface + evidence views; proprietary signing core excluded) · trend = binned median / per-group mean · post-normalization self-eval; same frozen split as the pre figure; not a public benchmark.
